Description

The PT46X6 Series transmitter is a $\pm 0.5\%$ sensor ideal for general purpose melt pressure measurements requiring simple installation, repeatability and reliability. The PT46X6 transmitters provide the industry standard 0 - 10 Vdc amplified signal designed to work with DCS and PLCs, 1 - 11 Vdc outputs are also available. The PT46X6 comes equipped with zero and span pots to adapt the transmitter to process conditions. Optional thermocouple or RTD configurations are available to provide melt temperature. The PT46X6 features a 1/2-20 UNF thread for installation in standard transducer mounting holes and can be supplied with a variety of electrical connections.
